

Department of Biostatistics
Monthly Seminar Series

Thursday, February 15, 2018

10:50am – 11:50am

Room ERMA 301

Speaker:

Casey Jelsema, PhD

Assistant Professor, Statistics

Topic:

Research Snapshot: Spatial and Constrained Inference

Abstract:

Next academic year I will be a faculty member of the SPH Department of Biostatistics. I have had limited interactions with SPH faculty and staff, but I am interested in developing more collaborative relationships. This talk is an introduction of my research, to describe what areas I have worked in, and what direction I would like to take going forward. Broadly speaking, my research has involved three areas: Spatial Statistics, Constrained Inference, and Interdisciplinary Collaboration. I will briefly introduce each area to introduce the audience to that domain, and I will describe in detail some of the projects from my current and recent work.
